RIMAC NEVERA

The word 'Nevera' means a powerful electrical storm, and it's pretty apt for this hypercar because Slovenian EV innovator Rimac packs some lightning punch into this svelte package. The company makes electric components and powertrains for some of the most exotic names in sports cars and, with a calling card like the Nevera, you can see why the likes of Aston Martin, Ferrari and Porsche have come knocking on Rimac's door.

Engine: Quad electric motor
Power: 1914bhp

Acceleration: 0-62mph <2.0secs
Top Speed: 258mph (est)

CORVETTE Z06 (C8)

For many years – decades, even – General Motors has been threatening to make the Corvette into a mid-engined model. Now, finally, with the eighth generation of America's Sports Car, it has done it. The result is a Corvette that's been to Italian supercar school, with butch American muscle meeting mid-engined Ferrari-like styling and handling. The pumped-up Z06 adds even more muscle to an already appealing recipe.

Engine: 5643cc V8
Power: 661bhp @ 8400rpm

Acceleration: 0-62mph 2.9secs
Top Speed: 195mph

PORSCHE 911 GT3 RS

The Porsche 911 GT3 RS is about as track-focused as a road car gets. The clue to its intended use is in the outlandish styling, but that aero isn't just for show – it's all there for a purpose. This includes the huge rear wing and snorting bonnet nostrils, while the underbody is fully panelled, with fins to better direct the airflow through and under the car. All of this trickery adds up to 860kg of downforce at 184mph.

Engine: 3996cc flat-six
Power: 518bhp @ 8500rpm

Acceleration: 0-62mph 3.2secs
Top Speed: 184mph

MARQUES of **DISTINCTION**

BENTLEY CONTINENTAL MULLINER

Distinctive 22-inch alloy wheels and a magnificently opulent 'Double Diamond' grille mark the Continental Mulliner out from its already imposing stablemates. There are V8-flavoured versions but if it's top-of-the-line lavishness you want (and you probably do), then the twin-turbo W12 will be the one for you – and that's distinguished by thumping twin exhaust pipes rather than the quad tailpipes of 'lesser' V8 Mulliners.

Engine: 5950cc twin-turbo W12 Acceleration: 0-62mph 3.6secs
Power: 650bhp @ 5000-6000rpm Top Speed: 208mph

LOTUS EVIJA

Lotus was originally known for lightweight sports cars rather than heavy all-electric hypercars. But it's a company that's also known for innovation, and in creating this 2000-horsepower beast, they're also promising to make it the lightest EV hypercar ever. With Lotus's record at the automotive cutting edge (including seven F1 Constructor's titles) you wouldn't want to bet against them succeeding.

Engine: Quad electric motors
Power: 1972bhp

Acceleration: 0-62mph <3.0secs (est)
Top Speed: 200mph+

ASTON MARTIN

27	23/30	24	25	26	27	28	29

ASTON MARTIN DBS 770

The 770 is the final flourish for the bruising twin-turbo V12 Aston Martin DBS, and the model is bowing out in some style. There are intricate 21-inch alloy wheels, carbon fibre trimmings for the horseshoe-shaped bonnet vent, and a huge rear diffuser. This is no track car, though. Instead, it's a big, continent-crushing GT that invites you to chuck in an overnight bag and head for the Alps, via the nearest derestricted autobahn...

Engine: 5204cc twin-turbo V12 with mild hybrid
Power: 759bhp @ 6500rpm

Acceleration: 0-62mph 3.4secs
Top Speed: 211mph

31	28	29	30	31			

MERCEDES **AMG SL55**

The Mercedes SL used to be more boulevardier than sports car, but the latest model aims to change that: for the first time, this generation of SL has been developed by the out-and-out petrolheads of Mercedes' AMG division and has the Porsche 911 firmly in its sights. That being said, it'll still cruise the coast roads of Malibu or the Cote D'Azur with supreme insouciance, only this time it's a joy on mountain switchbacks, too.

Engine: 3982cc twin-turbo V8
Power: 469bhp @ 5500rpm

Acceleration: 0-62mph 3.9secs
Top Speed: 183mph

35	25	26	27	28	29	30	31

MCLAREN 750S

The McLaren 750S is an evolution of the company's 730S rather than an all-new model, but the supercar maker says that 30 per cent of the car is new, and that includes a larger active rear wing, a new high-mounted exhaust, optional wheels that save 13.9kg of weight, an engine that develops 30bhp more thanks to higher boost pressure, and uprated suspension and steering. The result? A 200mph McLaren supercar that's even more super.

Engine: 3994cc twin-turbo V8
Power: 740bhp @ 7500rpm

Acceleration: 0-62mph 2.8secs
Top Speed: 206mph

MARQUES of **DISTINCTION**

FORD MUSTANG SM17

When a multiple Australian touring car champ and US IndyCar racing ace specifies a car to their own tastes, you just know it's going to be pretty quick. And so it proved when New Zealand racing driver Scott McLaughlin helped create the 'Scott McLaughlin Limited Edition SM17 by Herrod Performance' Ford Mustang. The first car in the world to use a newly developed 3.0-litre supercharger made by Whipple, it puts out a hilarious 775bhp.

Engine: 5038cc supercharged V8 **Acceleration:** 0-62mph 3.5secs (est)
Power: 775bhp @ 7500rpm **Top Speed:** 200mph (est)

BMW M3 CS

Considering its pretty punchy price tag (in excess of £30,000 more than a 'regular' M3), the M3 CS doesn't exactly deliver on the 'bang per buck' scale. However, you do get a revised anti-roll bar, stiffer suspension and a gearbox and engine that's been mounted more stiffly in the chassis. There's also a pair of racing stripes daubed prominently on the bodywork, just to remind you that this is one seriously special car.

Engine: 2979cc twin-turbo 6cyl
Power: 550bhp @ 6250rpm

Acceleration: 0-62mph 3.4secs
Top Speed: 188mph

ROLLS-ROYCE SPECTRE

If there's one brand that suits electrification, it's Rolls-Royce. Effortless power and near-silent progress? Sounds very on-brand for a bearer of the famous Spirit of Ecstasy. The Spectre uses the same aluminium spaceframe as the Phantom, Ghost and Cullinan, but instead of a creamy V12, the Spectre is powered by twin electric motors. It's not light either: courtesy in part of a 102kWh battery, it tips the scales at a hefty 2890kg.

Engine: Twin electric motors
Power: 577bhp

Acceleration: 0-62mph 4.5secs
Top Speed: 155mph

FERRARI PUROSANGUE

With Porsche, Lamborghini and even Aston Martin making an SUV these days, it was almost inevitable that Ferrari would eventually join the party. It maybe late, but Maranello has made quite the entrance with the dramatic Purosangue. Its swooping styling is striking enough, but add in the fact that it's a two-tonne 4x4 that can hit 120mph from rest in just 10.6 seconds and Ferrari's first SUV is quite the jaw-dropper.

Engine: 6496cc V12
Power: 715bhp @ 7750rpm

Acceleration: 0-62mph 3.3secs
Top Speed: 192mph+
